TVS Bikes & Scooters

Engine capacity reference for the RIDEWOLF app • Brand → Model → Engine CC

Use this reference to populate the TVS brand model dropdown. Engine capacities can vary by model year and variant; verify exact specifications before using them as authoritative registration data.

1. TVS Motorcycles

Model	Engine capacity
Apache RTX	299.1 cc
Apache RR 310	312.12 cc
Apache RTR 310	312.12 cc
Apache RTR 160	159.7 cc*
Apache RTR 160 4V	159.7 cc*
Apache RTR 180	177.4 cc*
Apache RTR 200 4V	197.75 cc*

TVS iQube	Not applicable — electric
TVS X	Not applicable — electric
TVS Orbiter	Not applicable — electric

4. TVS Moped

Model	Engine capacity
TVS XL100	99.7 cc

Notes for app implementation

• For petrol models, store the engine displacement as a numeric value (for example, 124.8).

• For electric models, use engineCC = null and keep the power type as Electric; store battery capacity separately when available.

• When the user changes the brand or model, clear any previous model/CC selection and populate the correct value for the selected model.

• Models and specifications can differ by year, trim, and market. The list above is a starting reference, not a complete official catalogue.

* Apache RTR values marked with an asterisk should be confirmed for the exact model year and variant.
